## Customer Revenue Analysis (Business Requirement 3)

| customer_name | Revenue |
|---------------|---------|
| Aashi         | 68000   |
| Aman          | 64000   |
| Neha          | 30000   |
| Akshat        | 30000   |
| Riya          | 21000   |

### Analysis Summary

Calculated the total revenue generated by each customer from completed orders. The analysis identified Aashi and Aman as the highest revenue-generating customers, indicating that a small number of customers contributed a significant share of the overall revenue. This information can help the business identify high-value customers and design targeted retention strategies.

## City-wise Revenue Analysis (Business Requirement 4)

| city   | Revenue |
|--------|---------|
| Delhi  | 98000   |
| Mumbai | 94000   |
| Jaipur | 21000   |

### Analysis Summary

Analyzed completed-order revenue across different cities. Delhi generated the highest revenue, followed by Mumbai, while Jaipur recorded the lowest revenue.

# Product Categorization (Business Requirement 6)

| product_name | price | product_level |
|--------------|-------|---------------|
| Laptop       | 60000 | Premium       |
| Phone        | 30000 | Premium       |
| Headphones   | 3000  | Budget        |
| Chair        | 7000  | Standard      |
| Desk         | 12000 | Standard      |
| Notebook     | 200   | Budget        |
| Pen Set      | 500   | Budget        |
| Monitor      | 15000 | Standard      |

## Analysis Summary

Products were classified into Premium, Standard, and Budget segments using price-based business rules. This categorization can support pricing and marketing strategies.

## Classification Summary

| Category | Price Range  |
|----------|--------------|
| Premium  | $\geq 30000$ |
| Standard | $\geq 5000$  |
| Budget   | $< 5000$     |

## Orders Above Average Revenue (Business Requirement 7)

| order_id | product_name | Revenue |
|----------|--------------|---------|
| 1001     | Laptop       | 60000   |
| 1002     | Phone        | 60000   |
| 1006     | Phone        | 30000   |
| 1011     | Phone        | 30000   |

### Analysis Summary

Compared each completed order with the average completed-order revenue using a subquery. The results highlight high-value transactions that contribute significantly to overall sales.

## Business Exceptions (Requirements 5 & 8)

| customer_name |
|---------------|
| Rohan         |
| Meera         |

| product_name |
|--------------|
| Monitor      |

### Analysis Summary

Identified customers who never placed an order and products that were never purchased. These findings can help target customer engagement strategies and inventory reviews.

# **Business Insights & Recommendations**

## **Analysis Summary**

### **Key Insights**

- Delhi generated the highest completed-order revenue.
- Premium products contributed significantly to overall revenue.
- The Monitor product received no orders.
- Revenue was concentrated among a small number of customers.

### **Recommendations**

- Investigate why the Monitor product has no sales before reducing inventory.
- Explore targeted promotions in Jaipur to improve revenue.
- Continue monitoring demand for premium products.
- Re-engage inactive customers through targeted marketing campaigns.
